

CONTENTS

Preface	ix
Introduction	xiii
1 Propositional logic	1
1.1 Introducing classical propositional logic	3
1.1.1 Formal language	4
1.1.2 Computing truth tables	8
1.2 Notions of truth and validity	12
1.2.1 Equivalences	13
1.2.2 Arguments and consequence relations	16
1.3 Worked examples	23
2 Some non-classical logics	39
2.1 Many-valued logics	40
2.2 Other logics	43
2.2.1 Temporal logic	43
2.2.2 Intuitionistic logic	46
2.2.3 Resource logics	48
2.3 Another look at intuitionistic logic	50
2.4 Worked examples	54

3 Introducing forward rules	69
3.1 Natural deduction rules	72
3.1.1 Rules for conjunction	72
3.1.2 Rules for disjunction	73
3.1.3 Rules for implication	74
3.1.4 Rules for negation	75
3.2 Using subcomputations	77
3.3 Example proofs	81
3.3.1 Proofs using \wedge , \vee and \rightarrow rules	82
3.3.2 Proofs involving negation rules	84
3.4 Formal descriptions of proofs	89
4 From forward to backward rules	95
4.1 Introductory heuristics	96
4.1.1 Adding positive and negative assumptions	97
4.1.2 Restart rule	103
4.1.3 A heuristic for negation	105
4.1.4 Rewriting assumptions	106
4.1.5 Summary of computation rules	109
4.2 Worked examples	110
4.3 A deterministic goal-directed algorithm	122
5 Methodology and metatheorems	129
5.1 Consequence relations and Hilbert systems	130
5.2 Hilbert formulation of a logic	132
5.3 Metatheorems about classical logic consequence	136
5.4 Propositional soundness and completeness	138
5.5 Proof of soundness	142
5.6 Proof of completeness	143
5.7 Fragment of $\{\wedge, \rightarrow, \perp\}$	155
5.8 Summary of systems and completeness theorems	158
5.9 Worked examples	158
6 Introducing predicate logic	167
6.1 Simple sentences	168
6.1.1 Building simple sentences	169
6.1.2 Truth of simple sentences	171
6.2 Variables and quantifiers	173
6.2.1 Scope of quantifiers	176
6.2.2 Quantifier rules and equivalences	178

6.2.3	Prenex normal form	182
6.2.4	Equality	184
6.3	Formal definitions	184
6.4	Worked examples	189
7	Forward and backward predicate rules	205
7.1	Reasoning with variables	206
7.1.1	Introduction to unification	210
7.1.2	A unification algorithm	212
7.1.3	The meaning of variables in clauses	215
7.1.4	Skolemization	217
7.2	Reasoning forwards	221
7.3	Reasoning backward	227
7.3.1	Connection with resolution	235
7.4	Decidability	237
7.5	Worked examples	238
8	Introduction to PROLOG	243
8.1	Getting started with PROLOG's syntax	243
8.2	Trying it all out	248
8.3	PROLOG's strategy for proving goals	253
8.4	Working with Lists	256
8.4.1	Terminology and Notation	257
8.4.2	Unifying lists	258
8.4.3	Useful predicates about lists	259
8.5	Operators in PROLOG	261
8.5.1	Operator Precedence and Associativity	262
8.5.2	Some built-in PROLOG operators	263
8.5.3	Declaring your own operators	267
8.6	Backtracking	268
8.7	Cut	270
8.8	PROLOG and classical logic	272
8.9	Clauses as first-order logic formulae	273
8.10	Theorem proving in PROLOG	276
8.11	From PROLOG to classical logic	278
Answers to the exercises		281
Bibliography		335

Index	342
