

## CONTENTS

Contents . . . . .	v
Acknowledgements . . . . .	ix
Introduction . . . . .	xi
Introduction to the revised edition . . . . .	xv
Open problems . . . . .	xvii
Added in proof . . . . .	xxiii
Notation . . . . .	xxxii
CHAPTER I. PRELIMINARIES . . . . .	1
§ 0. Introduction . . . . .	1
§ 1. Preliminaries and saturation . . . . .	1
§ 2. Order, stability and indiscernibles . . . . .	9
CHAPTER II. RANKS AND INCOMPLETE TYPES. . . . .	18
§ 0. Introduction . . . . .	18
§ 1. Ranks of types . . . . .	21
§ 2. Stability, ranks and definability . . . . .	29
§ 3. Ranks, degrees and superstability . . . . .	41
§ 4. The f.c.p., the independence property and the strict order property . . . . .	62
CHAPTER III. GLOBAL THEORY . . . . .	82
§ 0. Introduction . . . . .	82
§ 1. Forking . . . . .	84
§ 2. The finite equivalence relation theorem . . . . .	94
§ 3. The instability spectrum . . . . .	101
§ 4. Further properties of forking . . . . .	108

§ 5. The first stability cardinal . . . . .	122
§ 6. Imaginary elements . . . . .	130
§ 7. Instability . . . . .	137
CHAPTER IV. PRIME MODELS . . . . .	150
§ 0. Introduction . . . . .	150
§ 1. The set of axioms . . . . .	152
§ 2. Examples of $F$ 's . . . . .	157
§ 3. General properties of $F$ -primary models . . . . .	174
§ 4. Prime models for stable theories . . . . .	183
§ 5. Various results . . . . .	204
CHAPTER V. MORE ON TYPES AND SATURATED MODELS . . . . .	223
§ 0. Introduction . . . . .	223
§ 1. Orthogonality, regularity and minimality of types . . . . .	230
§ 2. Dimensions and orders between indiscernible sets . . . . .	240
§ 3. Weighted dimensions and superstability . . . . .	249
§ 4. Semi-regular and semi-minimal types . . . . .	267
§ 5. Multi-dimensional theories . . . . .	284
§ 6. Cardinality-quantifiers and two-cardinal theorems . . . . .	289
§ 7. Ranks revisited . . . . .	305
CHAPTER VI. SATURATION OF ULTRAPRODUCTS . . . . .	321
§ 0. Introduction . . . . .	321
§ 1. Reduced products and regular filters . . . . .	324
§ 2. Good filters and compactness of reduced products . . . . .	333
§ 3. Constructing ultrafilters . . . . .	345
§ 4. Keisler's order . . . . .	370
§ 5. Saturation of ultrapowers and categoricity of pseudo-elementary classes . . . . .	379
§ 6. Saturation of ultralimits . . . . .	390
CHAPTER VII. CONSTRUCTION OF MODELS . . . . .	397
§ 0. Introduction . . . . .	397
§ 1. Skolem functions and generalizations of saturativity . . . . .	400

§ 2. Generalized Ehrenfeucht–Mostowski models . . . . . 411  
 § 3. On the f.c.p., uniform trees and  $|D(T)| > |T| = \aleph_0$ . . . . . 419  
 § 4. Semi-definability . . . . . 426  
 § 5. Hanf numbers of omitting types . . . . . 432

CHAPTER VIII. THE NUMBER OF NON-ISOMORPHIC MODELS IN PSEUDO-ELEMENTARY CLASSES . . . . . 440

§ 0. Introduction . . . . . 440  
 § 1. Independence of types. . . . . 444  
 § 2. Unsuperstable theories . . . . . 455  
 § 3. Saturated models and the case  $\lambda = |T_1|$  . . . . . 464  
 § 4. Categoricity, saturation and homogeneity up to a cardinality 471

CHAPTER IX. CATEGORICITY AND THE NUMBER OF MODELS IN ELEMENTARY CLASSES . . . . . 479

§ 0. Introduction . . . . . 479  
 § 1. Superstable theories and categoricity . . . . . 481  
 § 2. On the lower parts of the spectrum . . . . . 497

CHAPTER X. CLASSIFICATION FOR  $\mathbf{F}_{\aleph_0}^a$ -SATURATED MODELS . . . . . 508

§ 0. Introduction . . . . . 508  
 § 1. Preliminaries . . . . . 509  
 § 2. The dimensional order property . . . . . 512  
 § 3. The decomposition lemma . . . . . 520  
 § 4. Deepness. . . . . 527  
 § 5. Deep theories have many non-isomorphic models . . . . . 533  
 § 6. Infinite depth . . . . . 548  
 § 7. Trivial types . . . . . 550

CHAPTER XI. THE DECOMPOSITION THEOREM . . . . . 557

§ 0. Introduction . . . . . 557  
 § 1. Stationarization . . . . . 557  
 § 2. The axiomatic treatment . . . . . 561  
 § 3. Specifying the axiomatic treatment . . . . . 572

<b>CHAPTER XII. THE MAIN GAP FOR COUNTABLE THEORIES . . . . .</b>	<b>590</b>
§0. Introduction . . . . .	590
§1. On $\mathbf{F}_\lambda^k$ and $\mathbf{F}_\lambda^l$ . . . . .	591
§2. Stable systems . . . . .	598
§3. On good sets . . . . .	603
§4. The $\text{otop}/\text{existence}$ dichotomy . . . . .	608
§5. From the $(\aleph_0, 2)$ -existence property to the $(\lambda, 2)$ -existence property . . . . .	616
§6. The book's main theorem . . . . .	620
 <b>CHAPTER XIII. FOR THOMAS THE DOUBTER . . . . .</b>	 <b>622</b>
§0. Introduction . . . . .	622
§1. Can the models be characterized by invariants? . . . . .	623
§2. On having many models, no one elementarily embeddable into another . . . . .	627
§3. On the Morley conjecture . . . . .	634
§4. $I(\aleph_\alpha, T)$ for $\alpha$ large enough . . . . .	643
 <b>APPENDIX . . . . .</b>	 <b>653</b>
§ 0. Introduction . . . . .	653
§ 1. Filters, stationary sets and families of sets . . . . .	653
§ 2. Partition theorems . . . . .	659
§ 3. Various results . . . . .	666
 <b>Historical remarks . . . . .</b>	 <b>673</b>
<b>References . . . . .</b>	<b>684</b>
<b>Index of definitions and abbreviations . . . . .</b>	<b>691</b>
<b>Index of symbols . . . . .</b>	<b>703</b>
